Professional Summary

Innovative and results-driven Freelance Software Developer with extensive experience in backend and frontend systems, artificial intelligence, machine learning, and cloud computing. Proven ability to design and deploy scalable web applications, data-driven trading systems, and process-automation platforms. Adept at integrating APIs, optimizing performance, and leading end-to-end software development from architecture to deployment.

Technical Skills

Languages: Python, JavaScript, TypeScript, SQL, HTML5, CSS3

Frameworks: Django, FastAPI, Node.js, React, Next.js

Machine Learning: PyTorch, TensorFlow, Scikit-learn, Pandas, NumPy

Cloud & DevOps: Docker, Kubernetes, AWS, GitHub Actions, CI/CD

Databases: PostgreSQL, MongoDB, MySQL, SQLite

Other: REST APIs, WebSockets, MQTT, ERP Integrations, Algorithmic Trading, PLC/IoT Systems

Key Projects

End-to-End Business System (React + FastAPI): Designed and deployed a full web application integrating vendor APIs, modular architecture, error handling, and cloud-based deployment using Docker and PostgreSQL.

Warehouse Management System (WMS-lite): Built a WMS system to track inbound/outbound stock, bin locations, and live reporting dashboards.

Manufacturing Monitoring Dashboard: Developed real-time dashboards with simulated PLC and IoT sensor data using MQTT and WebSockets.

ERP Integration Platform: Integrated third-party APIs and internal systems to automate business operations and data synchronization.

On-Call Alerting & Incident Tool: Created an alerting platform for system health monitoring and escalation notifications.

Microservices Architecture Demo: Implemented containerized services communicating over REST and Kafka for modular scaling.

CI/CD Pipeline & Testing Framework: Built automated testing suites and GitHub Actions workflows for continuous deployment.

Legacy Refactoring and Modernization: Upgraded legacy monolithic app into a modular, testable codebase with improved maintainability.

Business Rule Engine: Developed a dynamic workflow and rule-based engine for enterprise-grade automation.

Professional Experience

Freelance Software Developer (Jun 2021 – Present)

- Developed AI-powered trading systems using Python, Django, and Binance API.
- Built full-stack applications (React, FastAPI, Django) for finance and business analytics.
- Deployed and managed cloud-based applications with Docker and Kubernetes.
- Implemented IoT and PLC automation solutions integrating physical and digital systems.
- Created data-driven dashboards and market prediction tools using ML and neural networks.

Maintenance Technician – Monett Metals Industrial (Jan 2020 – Aug 2022)

- Maintained and programmed PLC systems and industrial automation equipment.
- Designed and modified electronic systems to improve plant efficiency.

Telecommunications Analyst – National Telecommunications Corporation (2013 – 2015)

- Oversaw network infrastructure, configured routers, and optimized connectivity. Cloud computing.

Education

CareerFoundry – Full Stack Web Developer Certification (2023 – Present)

Military University ESPE – Ethical Hacker Certification (2015)

University Marta Abreu of Las Villas – Engineer's Degree in Telecommunications & Electronics (2006)
